

THE FEDERAL
REDISTRIBUTION
TASMANIA

Submission CS5

Scott J

The Liberal Party Proposal – Lyons and Clark

I think this propels more than any other would run counter to the goal of using geographical boundaries as electoral boundaries. As Mark Mulcair explored in his option 1 of his submission, the option of moving areas in the Brighton LGA into Clark would result in three seats in Southern Tasmania being on the both sides of the Derwent River. In my opinion, the Derwent River and Storm Bay are the most prominent geographical aspects that separate communities in Southern Tasmania.

The Labor, Greens and Mulcair proposal 3.

While I appreciate the goal of more incremental changes, these proposals would move the areas around Kingston Beach into Clark and exasperate the problem I noted in my submission which is the non-continuous nature of Franklin. These proposal would widen the distance between the part of Kingston which is closest the main population centre of Clarence around Rosny.

I would also add that I don't understand the logic used in ruling out moving the Huon area into Clark his option 2. While the logic for not adding this area to Clark makes sense on one level, the exact same reasoning can be used for why this area should not be in Franklin but with the added point that the Huon and wilderness is separated from the Eastern Shore by Storm Bay.

I do note that these proposals and others advocate for the inclusion of Old Beach into Franklin. I was initially reluctant to include this in my proposal as I had suggested splitting the Glenorchy LGA and wanted to limit the splitting of any LGAs which were not already split. However upon noting the number of submission which have suggested this, I do see some benefit in this as I think prefacing geographical boundaries over council boundaries has merit.

Doug Chipman's proposal

I think Doug Chipman's is by far one of the better proposals. I think it fixes the issue of Franklin being non continuous by land and limiting Tasmania to only having one seat which is on both sides of the Derwent(Lyons) and even then, only upriver at a much narrower point than the mouth of the river. I also think it has been admirable to do so while keeping so many LGAs intact.

The only issues I have are relatively minor. While I would agree that Orford and Triabunna have a community connection to the Eastern suburbs is Hobart due to their proximity, Swansea and Bicheno are much further away and would have less in common with the Eastern Suburbs than Kingston.

I have also always seen the Midlands of Tasmania as what connects the various parts of Lyons together to make it a coherent electorate. Especially being linked through the arterial Midland Highway. I think by removing Brighton and Bridgwater from Lyons, this would create a separation from the other parts of the proposed electorate such as New Norfolk and Glenorchy LGA. I think A similar benefit could be had by simply splitting Brighton LGA by it's geographical boundaries such as the Jordan River so that everything West of the Jordan River remains in Lyons.

I would add that despite this, I believe this is less of an issue than existing non continuous nature of Franklin, especially the Huon LGA being included in the same LGA as Clarence.

Darrens MCsweeney's proposal for West

I note that Sweeney's proposal also appears to address the issue of the current Franklin being split between the two shores of the Derwent. While I do acknowledge that it is his proposed electorate of West is divided in a much narrower part of the Derwent and contains bridges linking the two shores, ultimately I think it fails in its stated goal to make to address Franklin being non continuous.

This proposal also unnecessarily splits Hobart City Council (HCC) which is the smallest and most compact council in Southern Tasmania. I think this would unnecessarily disrupt communities close to the City on the Western Shore.

I also think that no particularly strong reason was given as to how Glenorchy and Clarence share a particular similar community of interest. Most people from Clarence will cross the river at the Tasmania Bridge to access services and activities not available on the Eastern shore such as Tafe, working in the CBD or going to University.

Comment on my own proposal and comparison with other proposals

I can see through going through the other proposals that there is benefit into breaking down the numbers of register voters in the electoral boundaries I have proposed. I also think there is benefit in clearly demonstrating the boundaries that match my suggestion rather than the similar communities of interest.

Based on reading the other suggestions, I am satisfied to amend my previous suggestion to include Old Beach in Franklin, even though it splits the Brighton Council which the Brighton council has opposed. This would also enable the moving all parts of Kingston to the west of the Southern Outlet into Clark and by also moving Taroona into Franklin. This would have the added benefit of the northern boundary being the boundary with HCC. It would also provide a more seamless connection between Huon Council and HCC. I would also include Howden and Huntingfield in Clark which would require the boundary to go along Algona Road, the Peter Murrell Conservation Area and Brightwater Road.

I see my proposal as somewhat of a compromise proposal between the incrementalist proposal that make little change to Clark and Franklin and the more radical proposals such as and Chipman.

I see my proposal as gradually creating a purely Eastern Shore seat over two redistributions. I think given the level of population growth expected in Clarence and Sorell, it is only a matter of time before a seat completed east of the Derwent is viable. For example the enrolment data predicts three Rokeby SA1 areas having over 20 percent growth by 2030, including SA 60102101121 which is expected to grow by over 50 percent. I also think the enrolment projects will understate the growth in parts of Clarence. For example SA 60102100716 falls within the area of the major Skylands project and I would expect the growth to be higher if not by 2030 then soon after. When the project is finished, I would expect an Eastern Shore seat could easily be drawn with the population change.

This is the reason I propose a transitional change that would expand Franklin to include all of Sorell, and Tasman Councils as well as Richmond and Old Beach. By keeping the parts of Kingborough Council which are closer to Clarence along the riverline, it limits the distance of the furthest part on the Western Shore while also recognising the long history Franklin has had of being on both sides of the Derwent. It also recognises that both suburban Clarence and Suburban Kingston are quite similar, being beachside suburbs relatively close to the city with large numbers of office workers who

commute to the city. Large parts of Sorell and Tasman are either close to beaches or coastal. Both Sorell and Tasman are linked to the CBD through the Tasman Highway and Tasman Bridge which runs through Clarence. These geographical realities have created common community interests that are more distinctive than other parts of Hobart.

For these reason, if my proposal is not consider, I would hope that fair consideration is given to Doug Chipman’s proposal.

Map of Proposed Franklin Boundary (in red)

Skylands Development

<https://www.abc.net.au/news/2023-12-12/revised-skylands-droughty-point-masterplan-clarence-council/103217152>

Revised Skylands housing project approved by Clarence Council after knock back, but not all convinced of Droughty Point plan

In short:

Clarence City Council has approved a revised Skylands master plan, which paves the way for the construction of 2,500 homes at Droughty Point Peninsula, near Hobart. A previous master plan was knocked back earlier this year.

The council's decision has been welcomed by the mayor who's described the project as "transformative", but not all are convinced.

What's next?

Clarence council will now undertake development of a structure plan, which must occur before a development application can be lodged.

A controversial plan to build 2,500 homes on Hobart's eastern shore has been approved by Clarence City Council, but some councillors say they're still not fully on board with the plan.

Droughty Point, is a significant parcel of undeveloped land — about 240 hectares — and is about a 25-minute drive to Hobart's city centre.
